

FLEA CONTROL SERVICE PREP LIST

PRIOR TO OUR ARRIVAL

- Remove items from floors of closets and underneath beds.
- Remove items from floor areas as much as possible (toys, pet food bowls, boxes, etc.)
- Thoroughly vacuum carpets. Concentrate under furniture, under furniture cushions and along the edge of baseboards. This will aid in removing adult fleas, eggs and pupae.
- If pet(s) frequent the basement or garage, vacuum up any pet hair that has accumulated.
- Dispose of vacuum bag or empty filter cup when done.
- If a fish tank is present, unplug filter and loosely cover top of tank with plastic.
- Arrange to have all pet(s) removed from the house before treatment is to begin and for at least four (4) hours after treatment is completed.
- Dogs & cats should be treated (flea dip) by a vet or groomer before returning to the house.
- Pets should remain treated with a veterinarian approved flea & tick prevention product (Frontline®, Advantix®, Seresto®, etc.) on a monthly basis or as prescribed by the product label.
- All persons and animals must be vacated from the home before treatment begins and for at least four (4) hours after treatment is completed.

WHEN YOU RETURN HOME

- Open all windows to help ventilate the house. Do not allow children or animals into the home until well ventilated.
- Uncover fish tank and restart filter.
- Thoroughly vacuum each day for at least three (3) weeks.
- Dispose of vacuum bag or empty filter cup each time.
- Treatment may take a minimum of three (3) weeks to control the flea infestation. Please be patient and allow the applied insecticides to work.
